Claim 35-36; Page 115-117; 151pp; English.

Norphogens comprising an amino acid sequence sharing at least 70% homology with OP-1, OP-2, CBME2, BMP3(fx), Vg1(fx), Vgr(fx), DPP(fx), GDF-1(fx), 60A(fx) and at least 80% homology with BMP5(fx) are useful for maintaining the integrity of the gastrointestinal tract luminal lining in a mammal, including (1) limiting epithelial cell proliferation, (2) inhibiting ulcerative lesion formation, (3) inhibiting inflammation normally associated ulcerative diseases, and/or (4) stimulating the repair of sequence 399 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          glalcalggghgprpp-htc-pqrrlg-arerrdmgreilavlglpgr-prpragpaaar 67

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Morphogenic protein soluble complex - for regeneration of tissue in mammals and diagnosing tissue disorders claim 3; Page 75-77; 120pp; English.

This sequence represents the murine derived protein, osteogenic protein, mOP-2. The mature OP-2 protein was used as at least one subunit in the dimeric protein of the invention. This absociated to give a structure with morphogenic activity. Each subunit comprises more than 100 amino acids having a pattern of
                                                                                                                                                                                                                                                    Maintaining integrity of gastrointestinal lining using a morphogen (stimulant) - for treating or preventing ulceration, also to inhibit endothelial cell proliferation and reduce side
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          morphogenic activity; cysteine; morphogen; family; pro-region; complex; soluble; aqueous solvent; therapeutic composition; symptom-alleviating; co-factor; antibody; diagnosis; assay; quantitate; mature.

Each subunit comprises a mature form of a subunit of a member of the morphogen family, non-covalently complexed with a peptide comprising a pro-region of a morphogenic family member, to form a complex more soluble in aqueous solvents than the uncomplexed subunits. The dimeric protein is useful in a therapeutic composition, pref. also containing a symptom-alleviating co-factor. The protein and corresponding antibody may be used in diagnostic assays, eg. to quantitate the amount of mature and soluble forms of morphogenic

Mouse embryo full-length osteogenic protein Op-2 (W00239)
Includes a pro-sequence and the morphogenically active mature
Includes a pro-sequence (see also W00224) that includes a 7-cys C-terminal
domain. Op-2 can be expressed from intact or truncated cDNA
(T33444) in prokaryotic or eukaryotic host cells. Mature Op-2 and
other morphogens (see also W00221-35), partic. human Op-1 (W00221),
can be used to induce dentine morphogenesis, to seal dental
cavities and to desensitise teeth to pressure and/or temp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Treausing for compounds which modulate morphogen expression - by incubating in the presence of epithelial cells which contain a cellular gene for morphogenic protein expression

Disclosure: Columns 67-70; 49pp; Engilsh.

The present sequence represents a mouse osteogenic proteins. Morphogens of the present sequence represents a mouse osteogenic proteins. Morphogens are inactive when reduced, but are active as oxidised homodimers and when coxidised with other morphogens (e.g. Wi8683-62). Comparison of the amino coxidised with other morphogens (e.g. Wi8683-62). Comparison of the amino coxidised with other morphogens (e.g. Wi8683-62). Comparison of the amino coxidised with other morphogens (e.g. Wi8683-62). Comparison of the amino coxidised with other morphogens (e.g. Wi8683-62). Comparison of the correction only in embryogenesis, but also in tissue and correction or only in embryogenesis, but also in tissue and correction or mammals. They induce a developmental correction of a cellular gene encoding a naturally occurring morphogenic correction of a cellular gene encoding a naturally occurring morphogenic protein. The candidate compound is incubated with epithelial cells which express the cellular gene. A change in the level of the protein cells are assayed for the presence of or the amount of the protein cells are assayed for the presence of or the amount of the protein correction or identify compounds which can increase or decrease morphogen correction or levels. Such compounds can be used in the treatment of, cells and cirrhosis of the liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             194 GPPLYQLGAATQARPPPHASGPRRRLGCERAWNHSVREAGVPLGLPAPGARRRGGSASRS 253

Mean 40.462; Variance 196.348; scale 0.206 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Database:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. Mean 11.679; Variance 6.056; scale 1.928 Statistics:
